1. NYSE BQT Introduction

1.1 OVERVIEW

NYSE BQT is a real-time market data product that provides a consolidated view of the Best Bid & Offer and Trades for all equities and ETPs traded on the NYSE Group equities markets (NYSE, NYSE American, NYSE Arca, NYSE Chicago and NYSE National), as well as the ATS trades published by the NYSE Trade Reporting Facility.

NYSE BQT is especially useful for portfolio managers, wealth managers, online brokerages, and back office employees who need a real time source of indicative prices for US securities.

NYSE BQT consists of the following independent data feeds:

1. **Best Quotes (BBO)**, derived from the BBO feeds of the NYSE Group exchanges
2. **Trades**, derived from the Trades feeds of the NYSE Group exchanges and NYSE TRF
3. **Consolidated Volume**, derived from the SIP (CTA and UTP) Trades datafeeds
4. **Stock Summary,** derived from the underlying bbo, trades and sip dataset**.**

To view the individual client specifications for the proprietary feeds that serve as the input for BQT, see the website for the NYSE Group proprietary data feeds.

To receive the NYSE BQT feeds, clients subscribe to redundant pairs of multicast groups called channels to receive real-time market data messages. In order to recover from errors (sequence number gaps, late starts, client feed handler failures, etc.) clients can connect to a TCP/IP server and request retransmissions and refresh data, which is delivered over additional dedicated multicast channels.

For full details, see the XDP Common Client Specification on the NYSE BQT product page. For specific IP addresses, please refer to NYSE Proprietary IP Addresses.

1.1.1 BQT Trades Channels

Trades data, which includes NYSE TRF trades, is delivered in its own dedicated feed with Product ID 25.

- Trades Data (1 channel) includes Tick-by-tick price and size, Trading Conditions, and Market ID

1.1.2 BQT Best Bid/Offer (BBO) Channels

BBO data is delivered in its own dedicated feed with Product ID 26. It consists of 2 subsets of channelized data:

a) BBO Data (channels 1-4) includes Bid/Ask Price, Bid/Ask Size, Quote Condition, Market ID.
b) Consolidated Volume Data (channels 5-12)

1.1.3 BQT Consolidated Volume Channels

Consolidated Volume data is derived from SIP data (CTA and UTP). It contains input from all SIP participant exchanges, not just the NYSE Group exchanges - Consolidated Volumes will not match the Aggregated Volumes published in the BQT Stock Summary channel. There are 8 Consolidated Volume channels, with channel IDs 5 to 12.

- Channels 5 to 8 publish NYSE-, Arca- and American-listed stocks and 9 to 12 publish NASDAQ-listed stocks. Within each 4-channel market group, messages are channelized in alphabetic symbol ranges.
- The Consolidated Volume feed provides Retrans and Refresh services in dedicated multicast channels.

1.1.4 BQT Stock Summary Channels

Stock summaries are provided every minute:

- Stock Summary Data (1 channel) includes Open, High, Low, Last and Consolidated High / Low Prices

1.2 FIELD-LEVEL NOTES

1.2.1 Fields in Symbol Index Mapping Message (type 3)

The Symbol Index Mapping message (see the XDP Common Client Specification for details), when published by NYSE BQT, has the following field values defaulted to 0:

- Market ID
- System ID
- Prev Close Volume

1.2.2 Market IDs

The Market ID 0 (NYSE Group, or BQT) can appear in certain BQT messages when no valid information is available from any upstream market. For example, an empty quote can occur when there is no valid quote available for a certain instrument because all existing quotes have been cancelled or are not eligible for BBO calculations. In this case the Market ID field will contain 0.

1.3 TRADING SESSION TIMES

NYSE BQT and its NYSE Group source feeds start up at 2:00 am Eastern Time every morning. Shortly after feed start time, initial Symbol Index Mapping and Security Status messages are published. No messages are sent before this, but clients might see earlier source times for messages that were generated prior to the feed start time.

Full schedules of trading session hours on normal and early-close days for all NYSE markets are available here.

1.4 CONTROL MESSAGE TYPES

The set of control messages used in NYSE BQT follows. For further details, refer to the XDP Common Client Specification.
