Program Trading Averaged 44.3 Percent of NYSE Volume during Dec. 17-21

NEW YORK, Dec. 28, 2012 -- The New York Stock Exchange, a subsidiary of NYSE Euronext (NYX), today released its weekly program-trading data compiled from member firms' executed volume from NYSE's orders database. The report includes trading on the NYSE for Dec. 17-21.

The data indicated that during Dec. 17-21, program trading amounted to 44.3 percent of NYSE average daily volume of 2,095.2 million shares¹, or 928.1 million program shares traded per day. This included program trading associated with the December 21 quarterly expiration of stock-index options, futures and options on index futures.

Program trading encompasses a wide range of portfolio-trading strategies involving the purchase or sale of a basket of at least 15 stocks.

¹ The NYSE calculates program trading as the sum of shares bought, sold and sold short in program trades. The total of these shares is divided by the sum of shares bought, sold and sold short on the NYSE including its crossing sessions.

Any other use of the data is expressly prohibited without the express written permission of NYSE Euronext.

APPENDIX

What is Program Trading?

Program trading is defined as a wide range of portfolio trading strategies involving the purchase or sale of 15 or more stocks.

- An example is index arbitrage. Index arbitrage is defined as the purchase or sale of a basket of stocks in conjunction with the sale or purchase of a derivative product, such as index futures, in order to profit from the price difference between the basket and the derivative product.
- Other examples of program trading strategies are liquidation of facilitations, liquidation of EFP stock positions, and portfolio management, which includes portfolio realignment and portfolio liquidations.

The NYSE's program trading statistics are aimed at assessing the impact of these transactions on the normal functioning of the market. Daily program trading activity is calculated as the sum of the shares bought, sold, and sold short in program trades. The total of these shares divided by the sum of shares bought, sold and sold short on the NYSE including its crossing sessions, then provides a percentage, which illustrates the relative importance of program trading during the period in question.
